A STRATEGY GAME · THE WORLD

2350

You run one bloc of the world, from the 2140s to the year 2350. The AI runs the rules and plays everyone else, so there's nothing to learn before you start.

THE GOAL

In 2350 your people look back and score you: **out of what was possible, how good a future did you give them?** Every bloc gets a score, and the highest score wins.

Your score stays hidden until the end. What your people say each turn is your only clue.

A TURN · SIX OF THEM, ABOUT TEN MINUTES EACH

1

Read what just happened. It's short.

2

Answer three questions: **A, B, C or D**. Once a turn, say your own instead.

3

See what your choices did, and where everyone stands.

YOU CAN

Trade, ally, spy, threaten and go to war. **Land doesn't score by itself**, only what it does for your people. Nobody gets knocked out.

WATCH FOR

Three rumours every turn, and **one of them is false**. Disasters land at random. The other blocs remember what you did to them, and they push back.

TO START

1. Open your AI chat (ChatGPT, Claude or Gemini) and start a new chat.
2. Upload the game master file and the world board. **Don't read the game master file:** it holds the secrets.
3. Type **Let's play 2350**.

Each message ends with a scrambled line. That's the sealed envelope: skip it.

About an hour. At the end the AI reveals every secret: who played which disaster, what each rival was planning, and every score. Then it names your season: “2350: …”.
